

Half-barrel Frame Shelter THETA 5-600

Product Images

Short Description

THETA shelters are designed for high stability, easy logistics and comfort in extreme weather conditions and are suitable for medium and long term deployments.

Description

Frame

The frame consists of ground frame, (rectangular profiles), arches and spacers (circular profiles). All profiles are made of black powder-coated aluminum, while all security pins are made of galvanized steel. All parts are designed to make the frame highly transportable - no frame part is longer than 84.65 in or heavier than 15.43 lbs.

Shelter skin and floor

The shelter skin is made of lightweight high quality PVC coated fabric 1.37 lbs/ft², UV and water resistant. The roof and the sidewalls are integrated, while the groundsheet and gables are detachable. The groundsheet is made of PVC fabric (approx. 1.76 lbs/ft²) and is attached to sidewalls by Velcro.

The THETA shelter is equipped with 8 climatization passages, pairs of two, one above the other, in each corner.
